Begonia Gardens

Antonelli Brothers
SANTA CRUZ, CALIFORNIA

Hanging Basket Picotee

Our new basket hybrid originated by us and sold exclusively by our nursery. Many wonderful reports have come from our customers upon growing this tuber. Make your garden a showplace too.

One large or two medium tubers make a fine Hanging Basket the first year. Individually selected while in bloom. You may order in the following:

**Pink and rose shades,
red shades, salmon
and apricot shades.**

	Each	Dozen
Large	\$1.50	\$15.00
Medium	1.00	10.00

NEW-Ruffled Picotee

Another of our exclusive originations — this beautiful Picotee with ruffled edges will be a joy to grow.

Individually selected while in bloom, they come in the five Picotee colors — pink, rose, red, salmon and apricot.

	Each	Dozen
Large . .	\$1.50	\$15.00
Medium . .	1.00	10.00

Double Rose Form

These are the largest and most popular of the Tuberous Begonia types, resembling huge roses and camellias.

COLORS: White, Pink, Rose, Crimson Rose, Salmon Rose, Scarlet, Dark Red, Yellow, Apricot, Orange, Apricot Salmon, Orange Salmon, Flesh Salmon, Pink Salmon, Red Salmon, Flame Orange.

TUBEROUS BEGONIA SPECIAL

We have received so many good reports on the success in growing this size tuber that we are pleased to continue this special. These are not the small tubers offered in some specials but a full 1¼-1½" in diameter that produces nice strong plants with the same quality large blooms as the larger size tubers. Larger tubers produce larger plants with more flowers although the quality and size of blossoms are the same.

Available in the four main types of Tuberous Begonia Rose Form Page 4, Picotee Page 5, Ruffled Camellia Page 6 and Hanging Baskets Page 7. You may order any of these colors listed in these types and we will ship as ordered assorted in one bag. Basket variety kept separate.

25 tubers \$5.00

SINGLE CRESTED TYPE

Large single flowers with crest on petals, an attractive bedding or pot plant.

COLORS: In Mixture Only.

SINGLE FRILLED TYPE

Large, single flowers, fully frilled and very effective as a bedding plant.

Choice Select Tubers

Each year when our seedling plants are in bloom, we select and mark the finest flowers. These are above average in size, form and color and are offered to those who wish to start with show plants or add to a collection. They are selected from the four main types of Begonias—the Rose Form, Ruffled Camellia, Camellia Picotee and Hanging Baskets. Colors and types may be assorted.

Picotee Type

The Picotee type is characterized by its contrasting colors. Resembling large camellias or roses, this interesting type is becoming increasingly popular every year due to the wide variety of new shades being developed. Generally these flowers are either daintily edged or heavily bordered with a contrasting color, but they may also be strikingly mottled or spotted.

COLORS: Pink, Rose, Apricot, Red, Salmon.

HOW TO GROW TUBEROUS

Tuberous Begonias grow from seed and from tubers. They may be purchased in either of these forms or they may be secured as plants produced from seeds, tubers, or cuttings. They are easy to grow, and with reasonable care will thrive in most climates.

FROM TUBERS

The size of the tuber does not indicate the size or quality of the flower; however, the large tuber starts easier and will form larger plants. The natural dormant period of the tuber is the winter season, and in the spring the tuber will form sprouts.

SPROUTING

It is very important that a sprout appear before the tuber is planted.

You may move your tubers to a warm, dark place to get earlier sprouting. Placing tubers on damp soil or peat moss is not advisable as they will sprout without this dampness and with less danger of loss.

Start
Tubers in
shallow container

PLANTING

The sprouted tubers should be placed in shallow containers (nursery flats are ideal) of a mixture of leaf mold and sand, or of finely divided reed peat. They should be completely covered, leaving only the tips of the sprouts showing, as the roots develop from the top and sides of tubers. After planting in the flats, the tubers should be well watered and should not be watered again until they show dryness. It is important to keep the tuber in the

flat until the roots are well developed. The plant may attain four or five inches of growth before they are moved. A good root system will insure a finer plant.

POTTING

For the soil mixture used in the pot, we use seven parts of rotted leaf mold mixed with one part of barnyard manure and three parts of sandy loam. These proportions may vary depending on the difference in soils. In planting the tuber or the seedling in a pot, a piece of crockery is placed over the opening to allow proper drainage. The pot is filled one-third with the potting mixture, then two tablespoons of Full Bloom are sprinkled over this. The fertilizer is then covered with potting mixture and the plant is placed so the roots are about one inch above the fertilizer. In choosing the pot, it is well to allow room for the growth of the plant. A large tuber requires an eight- or nine-inch pot.

After potting, the plant is lightly watered and is not watered again until the soil shows dryness. Too much watering may cause the soil to sour and cause the loss of the tuber.

As the plant develops, the watering will become more frequent. A repeated simple rule is to "water only when the soil shows dryness." For a longer blooming season with

When the plant has reached 4 to 5 inches of growth, its root system is strong enough to allow transplanting or potting. Pots may be placed or moved about in shaded locations or planted right into the ground. See potting instructions above.

better flowers, the feeding of fish emulsion should be used several times, at two-week intervals.

The flowers will continue to bloom from June through October. As the plant starts to die in November, the water should gradually be taken away. When the plants are quite yellow and falling apart, the tuber should be dug, washed and put in the sun to dry. The stem should be removed, but not until it has dried sufficiently to pull out easily, as the tuber may be injured. When the tuber is thoroughly dry, it may be stored in a cool, dry place for the winter. In years of early rainfall, there is danger of losing your tubers by rotting. In this case, dig and place the plants in trays until they are sufficiently cured and a slight pull will remove the stem from the tuber.

FROM SEEDS

You may sow your seed from December until March, but the best results are obtained from those planted in February. This should be done in well-drained flats containing an inch and a half of well-decayed leaf mold. The seeds are watered with a light spray, covered with glass, and darkened with paper until germination. In a temperature of 60 to 70 degrees germination will take eight to ten days. As soon as the seed shows small white specks, the paper should be removed. Two or three days later small plants will show. The glass

Pots may be placed in or moved about in shaded locations or planted right into the ground. See detailed potting instructions above.

ROOTED BEGONIAS...

should be removed and the plants kept moist.

To avoid the growth of weeds and fungus, it is advisable to sterilize the soil with steam or soil fumigants before planting, and to water with sterilized water until the third leaf shows on the small plants. The plants may then be watered with fresh water for fifteen to twenty days before transplanting.

TRANSPLANTING

A good mixture for transplanting contains two parts of well-decayed leaf mold to one part of top soil, with a light application of well-decayed manure. At first the seedlings are planted one inch apart, and when they become crowded they are transplanted again. In five to six weeks they will be ready for potting or planting in the garden.

In Garden Planting, one should not "over do" the soil preparation. Such practices as digging trenches and filling them with loose leaf mold should be avoided. The most desirable soil is fairly loose but yet has sufficient body and nutrients to allow the plant to develop. A sandy soil requires the application of humus, whereas heavy soils require sand and leaf mold.

Begonias can not stand direct sunlight during the day (in most areas), therefore it is well to choose sites that afford the early morning sunlight or the late evening sunlight. The more sunlight the plant can receive without burning, the more flowers may be obtained, and

the larger the blooms. The Begonias should be planted in order that the point of the leaves faces the observer. This is known as facing the plant, and it is important if one is to see the bloom well.

After planting, Begonias require a minimum of watering during the early stages of growth.

PINCHING

To attain large flowers on the standard or upright type, all shoots should be removed except one. This is accomplished by breaking off, at any time, the growth that develops from the tuber. If you desire to make cuttings, allow the growth to develop two to three inches high on the extra shoots, then cut off at the tuber with a sharp knife, and then by planting in sand they will form their own tuber in the fall.

On the hanging basket variety started from tubers, all the sprouts should be kept and the crown pinched from the first main sprout when they attain four or five inches of growth. This induces the development of the lateral growth, and the growth of new sprouts. Lateral sprouts should not be pinched; they may be pinched before potting or soon after potting. Do not pinch the plants of the seedling hanging basket type the first year, as this does not allow time for flower production, and does not allow the tuber to develop properly.

For a full basket of seedlings, it is best to put from two to four plants in each basket, depending on the size of the container.

DROPPING OF BUDS

Begonias, although hardy and easy to grow under favorable conditions, are affected by overwatering, too dense shade, and lack of air, and as a result, will not bloom properly. They require fresh-air circulation, and will drop their buds and flowers in a very few days if kept indoors. If the center buds fall before they open, it is usually a sign that the soil is kept too wet. Care should be taken to avoid overwatering. In the cooler coastal areas, the use of peat moss should be avoided or used sparingly. If your plants become tall and spindling, with large leaves and few flowers, there is insufficient light. This may be remedied by removal to a less-shaded location.

POWDERY MILDEW

The powdery mildew problem on begonias has lessened considerably; however, care should be taken to keep this fungus from harming your plants. We have found that with just a little effort, begonias can be kept free of mildew with little cost.

We advise precautionary dusting with Sulphur or spraying with Doo-Spray. The first application should be applied soon after plants have started growth — repeat application once or twice up to blooming stage. After plants are in bloom Sulphur should not be used as it will burn the flowers.

If powdery mildew appears after your plants are in bloom, spraying the affected plants with Doo-Spray will eliminate the mildew. A 3½ oz. jar of Doo-Spray is enough material to keep 50 plants clean all year.

Copotox Dust is a good preventive of mildew, also, if used before the appearance of mildew and is the best material we know of for control and prevention of stem rot.

"Gosh — It's cold outside!"

SHIPPING NOTICE

On shipments to the colder climates—we will make them in March at the proper time for planting. Customers wishing their order in the early part of the year will accept shipment at their own risk.

Antonelli Hybrid Gloxinias

CONSISTENT BLUE-RIBBON WINNERS
AT CALIFORNIA FAIRS

With just a little care your Gloxinias will reward you with beauty for many months of the year. The important requirements are light, warmth, a good pot mix, and to be kept free of insects.

RECENT INTRODUCTIONS

LA RUE—Large flowers of the most brilliant red yet offered in the large flowered variety.

BLUE HEAVEN—The latest achievement in the blue color range.

KISS OF FIRE—Brilliant, all-scarlet—late-blooming—short, erect flowers on a compact plant. Our most popular Gloxinia. Kiss of Fire produces small tubers—large grade is 1¼-1½ inches in diameter.

RUBY—Wavy bright red flowers—light pink back—early-blooming, upright flowers. Large tubers, 1½-2 inches in diameter.

STAR DUST—Huge ruffled burgundy.

VELVET QUEEN—Very large ruffled violet red flower.

GLOXINIA SPECIAL—1¼-1½" in diameter—All different, including new varieties not yet offered.

8 assorted \$2.50 • 18 assorted \$5.00

OTHER COLORS

BLANCHE DE MERU—Rose, white throat.

MONT BLANC—White.

EMPEROR FREDERICK — Scarlet, white border.

EMPEROR WILLIAM — Violet, white border.

PRINCE ALBERT—Purple, frilled edge.

PRINCESS ELIZABETH—Soft violet, white throat.

ROI DES ROUGES—Dark crimson, frilled edge.

VIOLACEA—Soft violet.

TIGRINIA SPOTTED—Pink, rose, scarlet, lavender, violet, red.

PINK EDGE—White, pink edged.

GLOXINIA CULTURE

TUBERS—Gloxinia tubers may be started as soon as you receive them. To encourage root growth and to avoid overwatering, start tubers the same as Tuberous Begonias in flats or in small 4- or 5-inch pots. Tubers generally give several sprouts. To achieve a well-formed plant with the largest flowers, it is important to remove all but the main shoot by breaking or cutting off at the tuber. These shoots may then be started in sand or your regular rooting media. After rooting, treat the same as seedlings.

SEED—Gloxinia seed may be started by the same requirements and soil mixture used for Tuberous Begonias or African Violets. Either method is satisfactory. Care should be taken not to keep the soil too wet, and that foliage is dry during the night.

BUD BLAST—This is usually caused by attack of thrip. Other causes are over-feeding with a chemical fertilizer during the blooming period, and wetting the buds during very warm days with cold water. Remedy is simply correcting the cause—keep the plants clean, feed with organic

fertilizer, and care in keeping flower stems dry during very hot days.

POTTING—Our pot mix consists of two-thirds well-decayed leaf mold, one-sixth loam, and one-sixth steer manure. African Violet mix is satisfactory. Large tubers need a 7- or 8-inch pot, medium tubers 6- or 7-inch pot, using the same procedure as directions given for Tuberous Begonias.

PESTS—The most common pests are thrip and aphids, controlled easily by several insecticides made for that purpose.

Calla Lilies

The Calla Lily will grow in all types of soil; however, a well-drained, sandy loam is preferred. Heavy soils may be improved by applying leaf mold or sandy loam.

Summer-blooming Calla lilies should be planted as early as one's locality will permit in the spring. Winter-flowering Callas may be planted in the fall or early spring in severe climates.

The bulbs may remain in the ground for three years. They should then be dug and separated. In areas of severe winters, it is well to cover the ground thoroughly with a good mulch, or dig them each season when the plant has become dormant.

SUMMER FLOWERING

YELLOW CALLA—(Elliottiana)—Spotted Leaf
PINK CALLA—(Rehmanni)
SUMMER WHITE CALLA—(Maculata)—Spotted Leaf
 Ready in November - March

WINTER AND SPRING FLOWERING

LARGE WHITE CALLA—(Aethiopica)
SMALL WHITE CALLA—(Godfrey)

 August - September

ACHIMENES

ADELE DE LA HAUTE—Lavender rose.
AMBROISE VERSCHAFFELT—Lavender.
ANDERSONI—Medium blue.
CAMILLE BROZZONI—Lilac tint—brown dots.
CRIMSON GLORY—Lavender orange.

DIADEM—Purple red.
FRANCOIS CARDINAUX—Lavender.
HARRY WILLIAMS—Purple red (upright).
JEWEL—Lavender blue.
A. LONGIFLORA—Medium blue.

MEXICANA—Dark blue.
PULCHERRIMA—Purple.
ROYAL PURPLE—Royal purple.
VENUSTA—Dark purple.

Each \$.25 — One Variety 12 for \$2.00

CULTURE—Achimenes do best under the same conditions we grow African Violets. They desire a very loose mixture—a night temperature of 60 degrees, avoiding strong light. Started indoors they may be removed to a lath house or shady spot outdoors when they com-

mence to bloom. They do best by planting 6 to 12 tubers in a 6-inch pot, keeping varieties separate as they multiply terrifically. Beautiful baskets may be obtained by planting dozens of the tiny tubers in wire baskets. Tubers resemble tiny miniature pine cones.

ACHIMENES

STREPTOCARPUS

(Cape Primrose) Culture, Same As Achimenes

Streptocarpus is easy to grow and will do well outdoors in a shady, sheltered location, in any good loose soil, or as a house plant.

Colors range from pure white through pink, rose, salmon, blue, to a deep violet. Plants are shipped in crates of twenty-five—twelve plants may be ordered in conjunction with Tuberous Begonias or Gloxinias.

Antonelli Begonia Gardens

Nursery located 3 miles east of Santa Cruz, 1 block east of Live Oak School on Capitola Road. Next time you're in our vicinity drop in and visit us. We would love to get acquainted and show you around the gardens we're so proud of. Hope to see you soon.

Antonelli Brothers

*Antonelli Brothers
Begonia
Gardens*

We welcome you to our gardens to see the thousands of blooming plants that give you a feeling of being in Fairyland. See our TUBEROUS BEGONIA plants in our greenhouses and acres of seedling begonia blossoms in all colors and types under the lathhouses; also, our new introductions of our HYBRID GLOXINIAS in their new colors and our FLOWERAMA with its display of FERNS, one of the finest collections to be seen anywhere and THEN see THE CHAPEL OF FLOWERS—a display of beauty always to be remembered. All of these beautiful sights to be seen during the months of July through-out October. See our fields of RHODODENDRONS with many new and rare varieties and our AZALEAS—all a dazzling display to see. Rhododendron and Azalea blooming season is April to June.

We are members of the California Association of Nurserymen and the California Bulb Growers Association.
